

## Workcentre 7425 Driver For Mac

### Installation

#### Configure the Print Driver

1. Click **Start**, select **Printers and Faxes**, then the **Yield** path is **Start>Control Panel>Printers(0)**.
2. Right-click the printer's icon and select **Properties**.
3. Use the available tabs to set the printer's job processing defaults, including enabling **Bi-Directional Communication**. Additional settings may be accessed by clicking the **Printing Preferences** button on the **General** tab.

#### NetBIOS over IP Peer-to-Peer Printing

##### Before You Start

1. Obtain the print driver for your computer's operating system. See **Obtaining Drivers** on page 13.
2. Print a **Configuration Report**. See **Configuration Report** on page 22.
3. On the **Configuration Report**, verify that **SMB** and **TCP/IP** are enabled. Verify that the workstation's default domain is **Workgroup**, or a valid, 15-character master, workgroup name. Also note the printer's **SMB** file name, which appears the concatenation of the printer's name and the **Workgroup**. To enable **SMB**, see **Microsoft (MS) Print over IP** history on page 52. Modify the name of the **Workgroup** or printer's name (**SMB**) that named using **ControlPanel>Network**.
4. Make sure to configure the **DNS(WINS) Service(s)** for **NetBIOS** name-to-IP address resolution. Then provide the printer with the address of the **Server**. For more information, see **DNS/NetBIOS Configuration** on page 43.

##### An Alternative Procedure for Setting up NetBIOS over IP Peer-to-Peer Printing

Non-Enterprise System Administrators can use the following procedure:

1. On Windows XP computers, from the **Properties** selection of the **Local Area Connection** icon, verify that the **Internet Protocol (TCP/IP)** is installed. Select the protocol and click **Properties**. Verify that **TCP/IP** is configured for use of the **DNS Server**. Click the **Advanced** button and select the **DNS** tab. Verify that the **Use DNS-based Registration** checkbox is selected in **DNS** is checked. Select the **WINS** tab and verify that the **NetBIOS** setting is set to either the **NetBIOS** setting from the **IP** **Server** or that **NetBIOS** is enabled over **TCP/IP**. Click **General** from the **Client** tab. Select **Use Microsoft Networks** if available. Verify with your Operating System. Provide link nearby available through **Add Remote Programs** and **Add Remote Windows Components**, select **Other Network File and Print Services**, **Client Drivers**, check the box for **Print Services for Windows**, and click **OK** and **Next**.
2. When prompted for the **Name** or address of the server providing **DNS** enter the printer's **SMB Host Name** as seen on the printer's **Configuration Report**.
3. When prompted for a queue name, enter your preference of an easily identified name for the printer.
4. Install the print driver on your computer level, when prompted to select a port to print through, select the **LPR** port that you just created.
5. Print a **Test Print** to verify successful communication with the printer.
